

DaVinci Instructions

Step 1: Turn the main power switch upward to the On position, located at the bottom right side of the unit.

Step 2: Push the chamber release button upward and fill the unit about $\frac{1}{2}$ way with your ground material.

Step 3: Press the temperature button on the front of the unit to active the heat and select your desired temp with the + & - buttons.

Step 4: The red indicator light on the digital temperature display will change to green when the Da Vinci is ready for vaporization.

Step 5: Take long steady draws for about 10 – 15 seconds, until the material has been vaporized.

Step 6: Empty the heating chamber of your material and repeat the process as desired.
